EDUCATION

University of Florida, B.S. in Computer Science *Expected May 2029*
Relevant Coursework: Data Structures & Algorithms, Discrete Mathematics, Programming Fundamentals I and II

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, C++, Java, SQL, HTML, CSS
Frameworks & Libraries: React.js, Next.js, Node.js, Socket.io, FastAPI
Tools & Technologies: Git, GitHub, Supabase, Vite, Figma, Gemini API, Vertex AI, OpenAI API

WORK EXPERIENCE

Filipino Student Association Web Internship Program **Gainesville, FL**
Frontend Lead *Oct 2026 – Present*
- Lead frontend development of FSA's website, coordinating UI implementation across a team of developers.
- Delegate tasks and guide developers through implementation, keeping the team aligned on scope and priorities.

Code Coast Consulting **World Golf Village, FL**
Intern | JavaScript *Jul 2024 – Aug 2025*
- Taught JavaScript and programming fundamentals to students ages 5–14 over a year, adapting to each student's level.
- Coached students through debugging and computational problem-solving as they built their first programs.

Citi 1 Week Women-in-IT Internship **Jacksonville, FL**
Intern | JavaScript, HTML, CSS *Jul 2024*
- Led JavaScript development of a personal finance website prototype in a one-week program, collaborating with teammates on feature design and implementation.

PROJECTS

Brew and Bloom – WiCSE Design Team | React, JavaScript, Vite, GitHub, Figma *Sep 2026 – Present*
- Building the front end of a focus app that pairs Pomodoro sessions with a café theme to make staying on task feel rewarding. Built the session flow (drink picker, timer, and a receipt recording completed focus time) in React with hooks, props, and callbacks.
- Implemented a **useEffect** countdown and an animated cup that fills as the session progresses, giving real-time progress feedback. Shipped features through GitHub branches and pull requests.

Promptionary – Hackathon | Next.js, TypeScript, Node.js, Socket.io, Gemini API, Vertex AI *Oct 2026*
- Built and shipped a real-time multiplayer party game at a hackathon, using Socket.io to sync game state and scoring between players' phones and a shared host screen.
- Integrated speech recognition, Vertex AI image generation, and Gemini scoring. Added QR-code joining via Cloudflare Tunnel and API fallbacks so games keep running when AI services fail.

SASE Mobile Application Software Engineering Team | JavaScript, React.js, Supabase, Figma *Oct 2026 – Present*
- Contribute to UF SASE's mobile app for member engagement and organization profiles in a pull-request workflow.
- Extended the Supabase schema to support richer member profiles and submitted the changes through GitHub pull requests.

GeoGuard – WiCSE × American Express Shadowing Program | React, TypeScript, Node.js, Supabase *Aug 2026 – Present*
- Engineered a fraud detection algorithm that flags impossible travel from transaction timestamps, distances, and OpenRouteService travel estimates.
- Built a React dashboard on Supabase-backed APIs that visualizes transactions, fraud statistics, and geographic risk, using Faker.js data to simulate legitimate and fraudulent activity.

LEADERSHIP

Girls Who Code **Gainesville, FL**
Volunteer *Sep 2026 – Present*
- Teach Intermediate Level II programming to girls in Alachua County, building their coding and problem-solving skills.

Filipino Student Association **Gainesville, FL**
VP of Mass Communications *May 2026 – Present*
- Oversee website planning and coordinate communication teams to manage digital content and technical initiatives.
